HSE

Case Browser

Ending the ‘big document on a shelf’ perception of HSE Cases

RPS can provide up to date, secure and interactive access to your HSE cases on any internet device in the world.

The website enables a truly “live” and interactive document experience that provides an enhanced understanding of the key information and requirements included within an HSE Case. This is achieved through a detailed searching and filtering interface on the documents and the risk assessments.

It can also provide links from your HSE Case to other related electronic HSE Management System documentation.

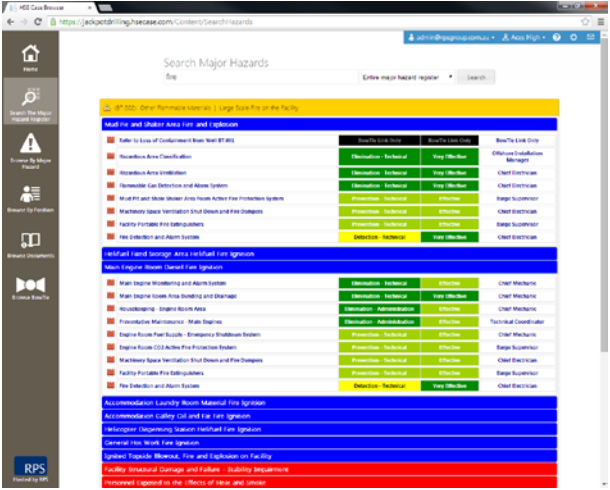

By purchasing a hosting and maintenance licence to access the HSE Browser online users will have:

- A customised website page with unique hostname and login page providing company specific corporate imagery.
- Access to all your uploaded HSE Cases that is password protected and encrypted on any internet enabled device.
- Ability to search the HSE Case to quickly find specific information including:
 - Interactively viewing BowTie analysis to easily select and display information about major hazards and their controls
 - Searching and filtering the Major Hazard register – to display the BowTie major hazards in a dynamic expanding and collapsing tabular format like a traditional hazard register.
 - Browsing through and filtering all of the contents of the major hazard register and displaying results related to the control measures
 - Browsing the major hazard register based on a chosen responsible person which has been allocated ownership or responsibility for controls
- Viewing individual control measures to show data from the risk assessment including, effectiveness, safety critical ratings, linked electronic resources and documents.
- An effective and searchable HSE Case document manager that allows HSE Case and other linked documents to be searched and viewed online within the web browser.
- A high quality online document viewer designed for low bandwidth environments that allow users to search documents and make annotations for comments and change requests.
- Ongoing support and maintenance of the website and HSE Case

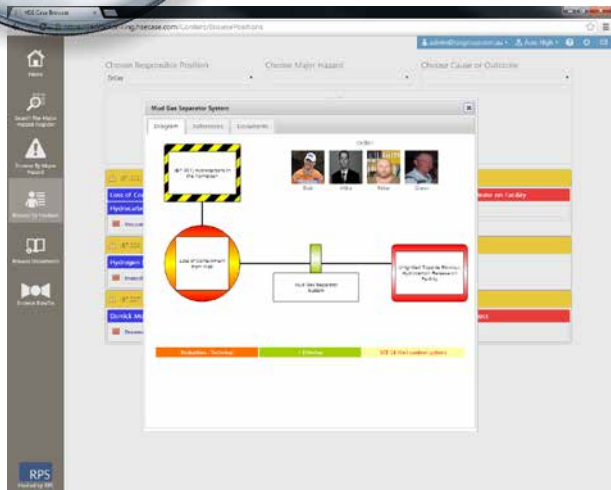

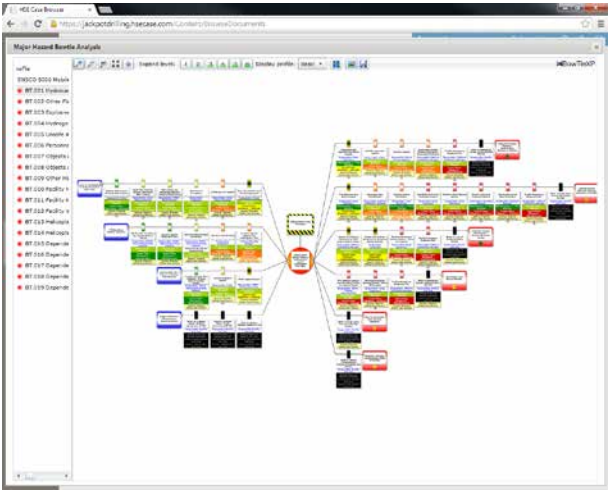

HSE Case Browser

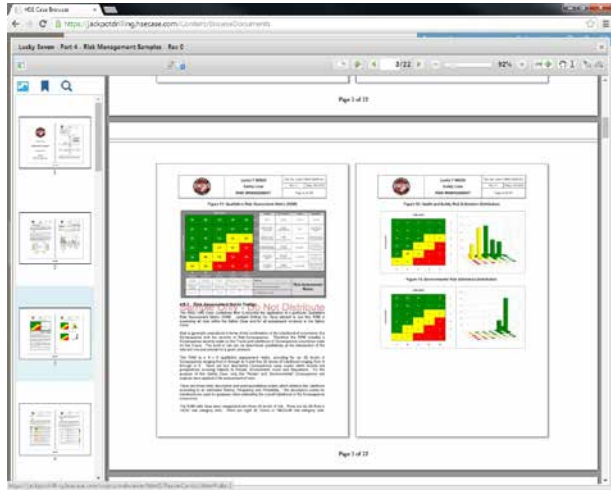

Major hazard register searching and filtering

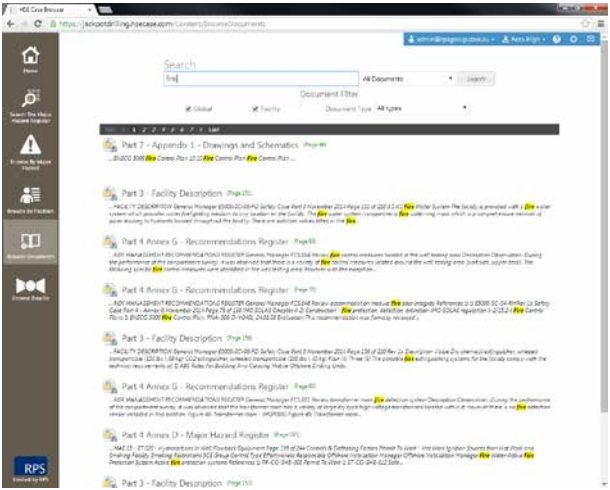

Customised display of detailed control information

Interactive major hazard bowtie browsing

High quality online document viewer

Full document search and filtering capabilities
