BowTieXP Web Viewer

Communicate your BowTies throughout the organization and improve barrier thinking

Risk communication has always been difficult to accomplish. Often, the conclusions of safety studies end up on a shelf, instead of being tailored and delivered to the employee.

The new BowTieXP WebViewer Portal allows organizations to distribute relevant information to the right places in the organization to ensure safe operations.

Key Features

Web Based communication
- The BowTieXP WebViewer allows you to view your BowTies anytime, any place through the web. Combine the power of BowTie visualisation with the power of the web.
- The BowTies are available throughout the whole organization.
- The BowTieXP WebViewer simply needs an internet browser and internet or intranet access, and the Microsoft Silverlight plugin.

Slots into your intranet or SharePoint
The BowTieXP WebViewer can be deployed to SharePoint or it can be embedded into your intranet. This means that employees, whether they're in HSE, Operations or Management, get exactly the information that they require. Deployment is simple: SharePoint deployment can be done by anyone who can edit pages; deployment to your intranet requires mimimal effort from your intranet's support staff.

Central BowTieXP-database
BowTieXP WebViewer Portal creates a central location for all your BowTies, making sure no valuable BowTie knowledge is lost.

Other features

- View additional information for all hazards, controls and escalation factors, providing viewers with more contextual and in-depth information, making the BowTie easier to understand.
- Re-uses display profiles you created in your BowTieXP case files - color coding and display of extra information are fully supported.
- Link to relevant documentation in your Document Management System, allowing viewers to deepen their insights into the BowTie.
